

Centurion FullHeight

Concept

CENTAMAN offers a wide range of indoor and outdoor Full Height turnstiles for applications in industrial entrances, sports arenas, military installations or other premises where you want to achieve a high degree of security without manned monitoring.

Full height turnstiles deter any chance of unauthorised users climbing over or tailgating making them ideal for unmanned areas whilst their robust construction suit both in and outdoors applications making this range ideal where control is the key need.

The CENTAMAN advantage...

- *Technically superior products*
- *Sydney based 24/7 support helpline*
- *Local offices for a faster response*
- *Flexible support packages*
- *Supply only to turnkey project delivery options*
- *14 Years experience in successfully delivering entrance control solutions*

The Centurion FullHeight turnstiles come with a sealed motorised drive which provides greater reliability, lower maintenance and faster, easier throughput than traditional mechanical units.

Models

ECO

Light yet robust full height construction with a high quality finish, trouble-free operation and a reliable mechanism make the ECO turnstile an effective solution for applications where maximum security and automatic unmanned identification of people is required. The standard finish is zinc treated for a rugged finish with options of polyester powder coating and stainless steel.

MAX

A rugged full height turnstile which come complete with a canopy to protect users from the elements. The standard finish is a central pillar of stainless steel and Polyester Powder Coat paint finish to a specified RAL Colour out parts.

with Integrated Gate

Both ECO and MAX are available with an integrated motorised gate. The gate has its own controls and as such acts independently. The gate can be used for controlling access of bicycles and other large deliveries or wheelchair access.

The gate can either be linked to the access control system or be operate by remote control from the security control point.

CLEAR

Designed for internal applications where security and aesthetics are paramount. The CLEAR comes with glass doors and frame escaping the traditional look and feel of full height solutions.

PC Based Monitoring Software

The easy to use TMON Software gives the reception team or security guard total control the turnstiles functionality and operating modes whilst also providing population counts from the turnstiles. Change operational modes on the fly, enable visitor entry, simplified alarm monitoring, analyse lane usage and change turnstile directions to calm traffic surges all at the click of a mouse.

Remote Turnstile Maintenance

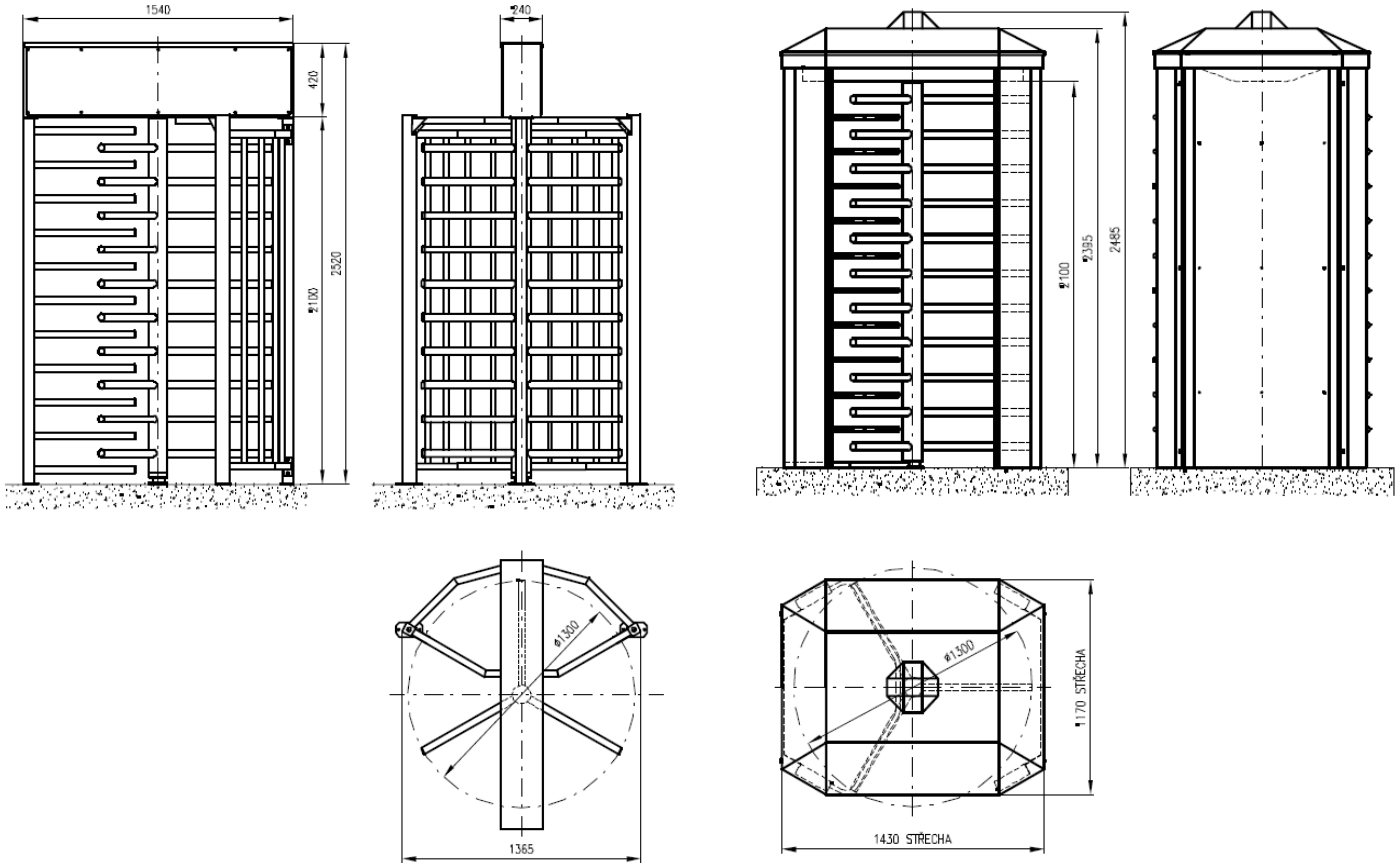

The main CPU of the turnstiles can now be accessed remotely by a PC allowing engineers to dial in and undertake remote maintenance, service, configuration & trouble shooting - In 80% of problems this can remove the need for a site visit, and in the event a visit is required the engineer will normally already have a good idea of what the issue is which means less time on site and a reduction in the likelihood of a return trip— thereby lowering the life costs of the system.

Key Benefits

- **High Security**
- **Prevents Jump Over Attempts**
- **Suitable for Unmanned Applications**
- **European Styling**
- **Motorised for Ease of Use**
- **24 Month Warranty**
- **MTBF of 3,000,000 operations**
- **Sealed Drive Unit for 'Maintenance Free' operation**
- **Integrates with most Ticketing, Membership and Access Control Systems**
- **Remote access option for maintenance, trouble shooting & configuration**
 - **Applications**
Secure Offices, Government, Sports Stadia, Factories, Military,

Remote Diagnostics Option

Centurion ECO Specification

Standard Finish -

Zinc Treatment Anticorrosion treatment

Cost Options

- Finish in Polyester Powder Coat or Stainless Steel
- Traffic Light/Traffic Light Holder

For Remote Turnstile Maintenance access to the sites network is required and the service is subject to a support agreement
