

CENTURION CLASSIC SECUREDOOR

SECURE

The SecureDoor range is designed to physically stop tailgating in unmanned situations, and provide a greater level of security than traditional turnstiles or speedgates.

They operate by the first door opening, and the authorised person proceeding into the portal. The first door closes, and the anti-tailgating system checks only one person is in the portal. Once this check is complete, and any additional security checks have been passed, the second door opens to let the authorised person into the secure area.

Centurion SecureDoor interlock technology ensures at least one door is closed at all times to restrict access. To prevent tailgating, the portal checks the entrant's weight against pre-set thresholds. If the weight exceeds the threshold, the Dynamic Weighing Software analyses how the weight has entered the SecureDoor. To protect against vandalism or attacks, the portal is made of attack and bullet resistant glass with options for higher rated solutions.

SAFE

The SecureDoor can be set to have both doors open for certain operational hours or deliveries. Other safety features include integration to the fire alarm, battery back-up to provide continued operation in case of power failures, internal anti-panic button to power down the last door opened so it can be manually opened, and IR safety sensors to check the door way is clear before closing. The SecureDoors come with an internal intercom for communication with security or reception teams. They also offer a VIP mode whereby the tailgate detection system is turned off for certain users.

KEY FEATURES

- ✓ Lowest cost and small footprint
- ✓ Designed to stop tailgating and piggyback attempts
- ✓ Sophisticated tailgate detection technology
- ✓ Highly reliable and most popular model
- ✓ Internal lighting
- ✓ Attack and bullet resistant glass options
- ✓ Door Interlock System to ensure one door is closed at all times
- ✓ Voice communication to guide users
- ✓ Remote control panel with intercom
