

Ramp LT

Concept

The Ramp LT System is a modular system designed to protect the floor and support Centurion pedestals without the need for drilling fixing bolts in to the floor or running a conduit under the floor between pedestals for cables.

The Ramp LT allows for quick, efficient and cost effective installation of Centurion turnstiles without damaging the floor of the building.

The Ramp LT System is ideal for applications where the materials used (such as marble, tiles, granites, etc) in the floor restrict drilling and cabling or where the building is Heritage Listed and any such works would be prohibited.

Additionally the system is suited to sites where the tenants of a building are on a short-term lease and they do not want to affect the infrastructure of the building or the landlord will not allow any chasing of the floor. The Ramp LT System is also ideal for temporary installations.

The Ramp LT can be used for standard and wide lanes alike.

The Ramp LT system is made up of a metal cover plate and a solid substructure with built in cables runs that sit in between the pedestals . The system also includes for the base that the pedestals are fitted to.

The Ramp LT allows for quick, efficient and cost effective installation of Centurion turnstiles without damaging the floor of the building.

The Centaman advantage...

- *Technically superior products*
- *Sydney based 24/7 support helpline*
- *Local offices for a faster response*
- *Flexible support packages*
- *Supply only to turnkey project delivery options*
- *14 Years experience in successfully delivering entrance control solutions*

Key Benefits

Protects the Floor

Discreet Finish

Eliminates the Need for Conduit and Underfloor Cabling

Low Profile Design

Modular Solution

Non Slip Finish

Option for Carpet Finish

Suitable for Standard and Wide Lanes
