EasyTouch

ABOUT

EasyTouch is our next generation remote control console specifically designed for reception and security desk applications. The EasyTouch easily manages and controls large groups of turnstiles or gates and has a space saving compact design with an intuitive graphical user interface.

The user friendly 10" touch screen requires minimal training for proficiency in navigating the various pages, remotely controlling the passage lanes and understanding the real time feedback such as alarm events when unauthorized access is detected.

The EasyTouch display immediately indicates which turnstile is in the alarm mode. The EasyTouch screen has a visual cue allowing the user/operator to quickly respond to the event.

You can easily set different operation modes of turnstiles / speed gates.

EasyTouch graphics is also available in Light and Dark mode to be chosen by the client

EasyTouch - Door access is an extra module that enables you to control 3rd party devices like a door or boom gate via the EasyTouch

Dark Mode

Light Mode
